Education

Harvard University — Cambridge, Massachusetts
Bachelor of Arts — Applied Mathematics — GPA: 3.76 — *Expected May 2029*
Courses: *Discrete Math for Computer Science, Solving and Optimizing, Introduction to Computer Science, Introduction to Probability*

Thomas Jefferson High School for Science & Technology (TJHSST) — Alexandria, Virginia
High School Diploma — *Class of 2025*
Courses: *Multivariable Calculus, Linear Algebra, Data Structures, AI, Machine Learning, AP Physics C*

Experience

Amazon Software Engineer Intern — Seattle, WA
EC2 Reserved Instances, Amazon Future Engineer — *Jun 2026 - Aug 2026*

- **Automated Subscription Cleanup**: Designed and built a serverless pipeline (Lambda, EventBridge, CDK) deployed across 36 AWS regions that automatically cancels ∼800 stuck billing subscriptions per month, eliminating a decade-old manual process and freeing held compute capacity
- **Safety-Critical Design**: Implemented defense-in-depth including shadow mode, cross-service state validation, volume thresholds, configurable buffer periods, and per-region feature-flag rollout to guarantee zero incorrect cancellations of paid subscriptions

Independent Tutor — Hybrid
Instructor (Part-time) — *2020 - Present*

- **Teaching**: Tutor students in physics, calculus, and computer science, adapting lesson plans to individual learning styles

Projects

Ctrl+Meet — 1st Place of 48 teams, Amazon Hackathon (2026): Co-built a full-stack intern matchmaking web app (React, AWS Lambda, DynamoDB, Bedrock) deployed live behind Midway SSO; designed a Gower-similarity matching engine using entropy-weighted survey signals and Titan V2 embeddings

jot-iT — Best Social Good Hack, HackTJ (2025): Built a mobile app that converts handwritten text to digital text using OCR; won the Vishnu Murthy Foundation Best Social Good Hack Award for potential impact in digitizing medical records in low & middle-income countries

SmartRally (Sep 2024 - May 2025): AI-powered mobile badminton coach that uses computer vision and deep learning to track player pose and shuttlecock trajectory, classify strokes, and recommend the next best move

AADT Limelight (2026): Web application that lets choreographers visualize and experiment with show lighting configurations digitally, replacing a manual spreadsheet-based workflow that required waiting until tech rehearsal to preview designs

Activities

Harvard Undergraduate Asian American Dance Troupe (AADT)
Board Member — Tech/Production Co-chair — *May 2026 - Present*

- **Production**: Design sound and lighting for 2 annual performances; coordinate venue logistics and tech rehearsals for a ∼300 member troupe

Harvard Undergraduate Hawai'i Club
Board Member — Lū'au Chair — *Jan 2026 - Present*

- **Event Leadership**: Organize and execute the annual Lū'au, managing food, decorations, and entertainment; coordinate logistics across officers and members

TJ Assistive Technology Club
Club Member — *Sep 2022 - Jun 2025*

- **Assistive Devices**: Designed and built assistive technology for children with disabilities; engaged weekly with non-verbal elementary students using NuVoice communication tools to build social connections

MIT MITES Summer Scholar
MIT Introduction to Technology, Engineering & Science — *Jun 2024 - Aug 2024*

- **1 of 62 selected from ∼4,100 applicants**: MIT's academic residential program to advance access & equity in STEM through a rigorous STEM curriculum

Skills

Languages: Java, TypeScript, Python, JavaScript, SQL, HTML/CSS, C++, MATLAB, LaTeX

Tools: React, Vite, AWS (Lambda, EventBridge, DynamoDB, CDK), Git, VS Code

Honors and Awards

- Amazon Future Engineer Scholar, 2025
- National Merit Commended Scholar, 2024
- Virginia Space Grant Consortium BLAST Scholar, 2021
